

Abstract of the Invention

One aspect of the invention relates to a small trash receptacle, generally less than 12" in height, adapted to use plastic bags as liners. In one embodiment, the trash receptacle has sides, which can be decorative and provide stability, and a front that
5 reveals the fill level of a clear bag. In another embodiment, the receptacle has a backboard that can be used for labeling or advertising. Another aspect of the invention relates to fittings that hold an ordinary plastic bag in the receptacle without the bag obscuring the receptacle.
